

MUJAHID SALIE

CURRICULUM VITAE

PERSONAL STATEMENT

I am a competent and highly motivated young man with a passion for business intelligence and helping others. I have completed a 3-year diploma in Operations (Business and Management science) from the Cape Peninsula Uni. Of Technology and I was privileged to complete a web development and software engineering course through HyperionDev in 2019. The experience and knowledge gained through my introduction to business intelligence has allowed me to further my transferable skill set, broaden my perspective and increase my capacity to comprehend and have alternate views of any given challenge. My career goal is to gain a position that allows me to share my ideas, further my knowledge, skills and responsibility, and gives me the opportunity to learn from and be guided by those more knowledgeable than myself. I would appreciate exposure from a company that could give me experience with working on large and varied projects with the aim of addressing operational and strategic challenges in a more optimizing way. I look forward to working with and learning from other industry employees with varied backgrounds and experience.
